

# Automation system CPX-AP-I

## Key features

## Key features

CPX-AP-I is a flexible, decentralised, compact and lightweight automation system with high degree of protection IP65/IP67.

The performance of the system is future-proof in terms of the forthcoming demands on the digital factory, and advantageous compared with a slow point-to-point connection.

The simple structure and high degree of scalability ensure the automation system CPX-AP-I is equipped for future applications:

- Extremely easy to assemble
- Separate cables for communication and power supply to form voltage zones and for stable data transfer
- Electrical isolation of output channels
- Digital electronic rating plate available

- Easy to update firmware
- Simple maintenance access to the system via Ethernet
- Easy to integrate
- Realtime capability
- Up to 80 individual modules/valve terminals per bus interface
- Easy to adapt to different control systems by exchanging the bus interface
- Direct connection of valve terminals
- Choice of M8 or M12 electrical connections
- Cable length up to 50 m cable length between the modules

An automation system CPX-AP-I consists of a bus interface and at least one other module. System communication between the modules takes place via connecting cables. The process data is exchanged cyclically.

The following module types are available:

- Bus interface
- IO-Link master
- Input modules
- Input/output modules
- Interface to the valve terminal

## Key features

## Overview

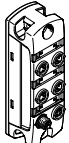

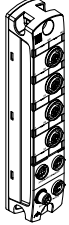

[1] Higher-order controller  
 [2] Bus interface for connecting the automation system CPX-AP-I to a higher-order controller via a standard bus protocol such as PROFINET

[3] Input module, output module or input/output module; allows sensors and actuators to be connected to the automation system CPX-AP-I. Up to 80 modules per bus interface possible

[4] Valve terminal with electrical interface for CPX-AP-I. Behaves like an output module within the automation system CPX-AP-I  
 [5] Connecting cable for communication between the modules and the bus interface. The maximum line length from the bus interface to the module is 50 m

[6] Connecting cable for supplying power to the components of the automation system CPX-AP-I. Each module can be connected individually or a central supply is transmitted from module to module

The connecting cables are specially designed for the requirements of the automation system CPX-AP-I.

If variants other than those specified in the accessories are used, the correct operation of the system cannot be guaranteed.

## Key features – Mounting

### Mounting

#### Wall mounting – Modules

The modules can be mounted on flat surfaces in almost any position using the mounting holes provided (with screws up to 4 mm in diameter). Secure mounting requires two screws with correctly sized washers (not included in the scope of delivery).

The mounting holes also include the earthing connection for the modules.

#### H-rail mounting – Modules

The H-rail mounting CAFM can be used to mount the modules on H-rails to EN 60715. Secure mounting requires two screws with metric thread M4 and correctly sized washers (not included in the scope of delivery).

For mounting, first the H-rail mounting is hooked onto the H-rail and latched in, and then the module is firmly screwed onto the H-rail mounting.

The mounting holes also include the earthing connection for the modules.

#### Assembly – Electrical interface

The electrical interfaces are mounted directly on the associated valve terminal.

Options for wall mounting or H-rail mounting depend on the mounting options for the valve terminal in question.

## Key features – Power supply

### Labelling

All modules are supplied with the same clip-on inscription labels. The inscription label is made up of two parts and can be divided into two smaller units if required.

Labelling templates can be downloaded from the Support Portal:  
 → Internet: CPX-AP-I  
 In the “Software” area.

### Power supply concept

- [1] Power supply to the module via 4-pin push-in connector M8
- [2] Power transmission from module to module via 4-pin push-in connector M8
- [3] Separate power supply for an individual module
- [4] Earthing connection
- [5] Power supply for the internal electronics and sensors
- [6] Power supply for electrical outputs and valves

In principle, the automation system CPX-AP-I has two separate electrical circuits:

- For the module electronics and the power supply for connected sensors
- For connected outputs and valves

At the same time, the automation system allows each individual module to be separately supplied with power, or for the power supply to be transmitted from module to module.

This creates electrically isolated, all-pin disconnectable potential groups/voltage segments.

All modules have the same connections for power supply, even when a module does not require all of these itself (e.g. an input module also has connections for outputs and valves).

## Key features – Diagnostics

### System performance

#### Diagnostics

Detailed diagnostic functions are needed in order to quickly locate the causes of errors in the electrical installation and therefore reduce downtimes in the production plant.

A basic distinction is made between on-the-spot diagnostics using LEDs and diagnostics using a bus interface.

The automation system CPX-AP-I supports on-the-spot diagnostics using LED indicators on each module. This is separate from the connection area and therefore provides good visual access to status and diagnostic information.

Module and channel-specific diagnostics are supported, for example:

- Undervoltage identification
- Short circuit detection

The diagnostic messages can be read out via the bus interface in the higher-order controller and visualised so error causes can be recorded centrally and evaluated. This is done using the individual bus-specific channels.

#### Indicator lights

Each module has a row of LEDs for indicating the operating status of the module and of the connected sensors or actuators.

[4] Communication-specific LED indicator (e.g. status of network connection, switching status of sensor)

- [1] LED indicators on the bus interface
- [2] LED indicators on the input module, input/output module
- [3] System-specific LED indicator (e.g. power supply)

#### Parameterisation

Various parameters are available for reading out information about the modules of the automation system CPX-AP-I and adapting the modules to the application situation.

The parameters are typically accessed via the higher-order controller.

## Key features – Addressing

## Addressing

The various modules of the CPX-AP-I occupy a different number of addresses within the CPX-AP-I system. The maximum address space for the bus interface depends on the performance of the fieldbus systems.

Maximum system configuration:

- 1 bus interface
- 80 input and/or input/output modules and/or electrical interfaces

The maximum system configuration can be limited in individual cases by exceeding the address space or limitations of the higher-order controller.

Addresses are allocated automatically. The bus interface is allocated the address "1", all other modules are assigned an address in increasing value from left to right, viewed from the bus interface. The modules of the first string (XF20) come first, then the modules of the second string (XF21).

**Note**

Please refer to the detailed description of the configuration/addressing rules in the technical data for the CPX-AP-I bus interface.

## Overview – Address space for CPX-AP-I bus interface

	Protocol	Max. total Inputs	Outputs
CPX-AP-I-PN-M12	PROFINET	1024 bytes	1024 bytes
CPX-AP-I-PB-M12	PROFIBUS	244 bytes	244 bytes
CPX-AP-I-EC-M12	EtherCAT	2048 bytes	2048 bytes
CPX-AP-I-EP-M12	EtherNet/IP	1324 bytes	1324 bytes

**Note**

The bandwidth of the bus interface can be restricted by the choice of module and the maximum number of modules.

## Technical data – PROFINET interface

Interface for operating the automation system CPX-AP-I on PROFINET. Data is transferred on the basis of the Ethernet standard and TCP/IP technology for communication in an industrial environment.

### Bus connection

Communication with a higher-order controller takes place via PROFINET with real-time protocol (real time RT or isochronous real time IRT).

The bus connection is provided via two equivalent D-coded M12 sockets which meet Ethernet requirements.

The integrated switch supports star and line topology and enables the network to be divided into segments.

## Technical data – PROFIBUS interface

Interface for operating the automation system CPX-AP-I in a PROFIBUS-DP network. PROFIBUS is designed for fast, time-critical and complex communications tasks and is incorporated into the international standards IEC 61158 and IEC 61784.

### Bus connection

The bus connection is provided by two network connections PROFIBUS DP-IN (M12 plug) and PROFIBUS DP-OUT (M12 socket).

The network can be divided and enlarged using additional repeaters.

This makes it possible to structure the network and implement greater network expansions.

## Technical data – EtherNet/IP interface

### EtherNet/IP™

Interface for operating the automation system CPX-AP-I in an Ethernet network using the protocols EtherNet/IP or Modbus/TCP. Data is transmitted on the basis of Industrial Ethernet.

#### General technical data

##### Fieldbus interface

Protocol	EtherNet/IP
Function	Bus connection incoming/outgoing
Transmission rate	[Mbps] 100
Type	Ethernet
Connection type	2 x socket
Connection technology	M12x1, D-coded to EN 61076-2-101
Number of pins/wires	4
Galvanic isolation	Yes
Max. address volume for outputs	[byte] 1324
Max. address capacity inputs	[byte] 1324

##### Communication interface

Protocol	AP
Function	System communication XF10 IN / XF20 OUT
Connection type	2 x socket
Connection technology	M8x1, D-coded to EN 61076-2-114

## Technical data – IO-Link master

### Function

The IO-Link master has 4 IO-Link connections, which enable any IO-Link components and Festo components with an I-Port connection to be linked up to the automation system CPX-AP-I.

- IO-Link master
- Connection M12x1, 5-pin
- Status and error indication via LED

### Description

The IO-Link communication system is used to exchange serial data from decentralised function modules (devices) at the field level.

The IO-Link master provides four external IO-Link interfaces, at each of which a device can be connected.

The connection type corresponds to a star topology, which means that only one device can be connected to each port.

In the factory settings, each IO-Link port has an address space with 9 bytes of input data and 8 bytes of output data.

Address space, master port and the connected devices can be parameterised with the aid of the IO-Link device tool.

DIL switches are available for a range of further settings.

A 30-day trial version of the IO-Link device tool can be downloaded from the Support Portal. A licence is required at the end of the trial period.

The necessary licence for continued use can be purchased via the Festo AppWorld.

## Technical data – Digital 4-way input modules

### Function

Digital input modules facilitate the connection of electric sensors to IEC 61131-2 type 3 (inductive, capacitive) with an operating voltage of 24 V DC.

- Input modules for 24 V DC operating voltage
- Connection M8x1, 3-pin
- Status and error indication via LED

## Technical data – Analogue input modules

### Function

Analogue input modules make it possible to detect 4 analogue input signals. All 4 channels can be set separately to measure current, voltage, temperature or resistance.

- Input modules for 24 V DC operating voltage
- Connection M12x1, 5-pin
- Status and error indication via LED

## Technical data – Digital input/output modules

### Function

Digital input/output modules facilitate the connection of electric sensors to IEC 61131-2 type 3 (inductive, capacitive) and of electrical consumers to IEC 1131-2 type 0.5 with an operating voltage of 24 V DC.

- Input/output modules for 24 V DC operating voltage
- Connection M8x1 3-pin or M12x1 5-pin
- Status and error indication via LED

## Technical data – Electrical interface for valve terminal VTUG

### Function

The electrical interface facilitates a valve terminal VTUG to be operated as a component of the automation system CPX-AP-I.

- Indication of status and error messages via LED indicators
- Up to 24 valve positions with up to 48 solenoid coils
- Separate load voltage supply for the connected valves; can be disconnected separately
- Short-circuit disconnection

### General technical data

Type	VAEM-L1-S-12-AP	VAEM-L1-S-24-AP
Maximum number of valve positions	12	24
Max. no. of solenoid coils	24	48

### Communication interface

Protocol	AP-COM
Function	System communication XF10 IN / XF20 OUT
Connection type	2 x socket
Connection technology	M8x1, D-coded to EN 61076-2-114
Number of pins/wires	4

## Technical data – Electrical interface for valve terminal MPA-L

### Function

The electrical interface facilitates a valve terminal MPA-L to be operated as a component of the automation system CPX-AP-I.

- Indication of status and error messages via LED indicators
- Up to 32 valve positions with up to 32 solenoid coils
- Separate load voltage supply for the connected valves; can be disconnected separately
- Short-circuit disconnection, short-circuit diagnostics and switching cycle counter

General technical data	
Maximum number of valve positions	32
Max. no. of solenoid coils	32
Communication interface	
Protocol	AP-COM
Function	System communication XF10 IN / XF20 OUT
Connection type	2 x socket
Connection technology	M8x1, D-coded to EN 61076-2-114
Number of pins/wires	4
Screening	Yes

General data	
Diagnostics via LED	Diagnostics per module Power supply load
Diagnostics via internal communication	Electronics/sensors overvoltage Electronics/sensors undervoltage
Electrical isolation of outputs between channel and internal communication	Yes
Maximum cable length [m]	50 system communication

Technical data – Electrical components		
Type		VAEM-L1-S-12-AP
Nominal operating voltage, electronics/sensors	[V DC]	24
Permissible voltage fluctuations for electronics/sensors	[%]	±25
Nominal operating voltage, load	[V DC]	24
Permissible voltage fluctuations, load	[%]	±10
Power failure buffering	[ms]	10
Mains buffering of load	[ms]	3
Maximum power supply		2 x 4 A (external fuse required)
Fuse protection (short circuit)		Internal electronic fuse per channel
Protection against direct and indirect contact		PELV SELV
Reverse polarity protection		Yes
Intrinsic current consumption at nominal operating voltage for electronics/sensors	[mA]	Typically 30
Intrinsic current consumption at nominal operating voltage, load	[mA]	Typically 15

Electrical connection, power supply	
Function	Incoming electronics/sensors and load
Connection type	Plug
Connection technology	M8x1, A-coded to EN 61076-2-104
Number of pins/wires	4

Electrical connection, power transmission	
Function	Outgoing electronics/sensors and load
Connection type	Socket
Connection technology	M8x1, A-coded to EN 61076-2-104
Number of pins/wires	4
