## RoHS Certificate of Compliance

This document certifies that the part numbers listed in this document and manufactured by Linx Technologies do not to the knowledge of the certifier contain the substances listed in the table below in concentrations exceeding the Maximum Control Value (MCV), and will be compliant as of the date listed.

Substance	Maximum Control Value
Lead	0.1% by weight (1000 ppm) <sup>(1)</sup>
Mercury	0.01% by weight (100 ppm)
Cadmium	0.01% by weight (100 ppm) <sup>(1)</sup>
Hexavalent Chromium	0.1% by weight (1000 ppm)
Polybrominated Biphenyls (PBB)	0.1% by weight (1000 ppm)
Polybrominated Diphenyl Ethers (PBDE)	0.1% by weight (1000 ppm)

(1) The MCV does not apply to applications for which exemptions have been granted to the RoHS Directive

Products containing the substances listed in the table above, in concentrations below the MCV, are understood to be in compliance with Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronics equipment (RoHS Directive) in accordance with the definitions set forth in the directives.

## REACH & SVHC Statement

When the REACH regulations were first released Linx Technologies reviewed the regulations and the applicability of the regulation to Linx products. At that time we determined that the products provided by Linx were not subject to the REACH regulation, as intended release of substances is not an inherent function of the supplied products. As such, we did not maintain a database of material composition and SVHC data.

Based on the types of polymers used in the majority of our connector and antenna products (PTFE and widely used plastics such as ABS and Polyurethane) we do not believe the 169 components on the SVHC candidate list nor the 31 components on the SVHC authorization list are present in these products, nor do we know of any use of the SVHC materials in our products. We do not believe that the use of common metals such as brass with gold or nickel plating is a concern as well. As we compile the necessary data to support this understanding we will provide updates as appropriate in the event this knowledge changes.

As additional information has been presented regarding the need to advise on the presence of substances of very high concern (the SVHC 53, SVHC 73, SVHC 138, SVHC 144, SVHC 151, SVHC 155, SVHC 161, SVHC 163, SVHC 168, SVHC 169, SVHC 173 and SVHC 174 lists) we understand that we need to aggregate information on these materials. We are in the process of implementing this activity which, as you are aware, can be an extensive effort to be sure the information is correct and complete.
