ESD PROTECTION FOR HIGH-SPEED SIGNAL OR DATA LINES

The VBUS03N1-HD1 is a Unidirectional ESD protection device which clamps positive and negative overvoltage transients to ground. Connected between the signal or data line and the ground the VBUS03N1-HD1 offers a high isolation (low leakage current, low capacitance) within the specified working range. Due to the short leads and small package size of the tiny DFN1006 package the line inductance is very low, so that fast transients like an ESD strike can be clamped with minimal over- or undershoots. Due to the very low capacitance the VBUS03N1-HD1 can be used for high speed data ports like HDMI, USB 3.0 or Thunderbolt.
